

Automata, Languages and Computation

Chapter 4 : Properties of Regular Languages

Master Degree in Computer Engineering
University of Padua
Lecturer : Giorgio Satta

Lecture based on material originally developed by :
Gösta Grahne, Concordia University

- 1 Pumping Lemma : every regular language satisfies this property; useful to show that some languages are not regular
- 2 Closure properties : how to combine automata using specific operations
- 3 Decision problems : algorithms for the solution of problems based on automata/regex and their complexity
- 4 Automata minimization : reduce number of states to a minimum

Introduction to pumping lemma

Suppose $L_{01} = \{0^n 1^n \mid n \geq 1\}$ were a regular language

Then L_{01} must be recognized by some DFA A ; let k be the number of states of A

Assume A reads 0^k . Then A must go through the following transitions :

ϵ	p_0
0	p_1
00	p_2
\dots	\dots
0^k	p_k

By the pigeonhole principle, there must exist a pair i, j with $i < j \leq k$ such that $p_i = p_j$. Let us call q this state

Introduction to pumping lemma

Now you can **fool** A :

- if $\hat{\delta}(q, 1^i) \notin F$, then the machine will foolishly reject $0^i 1^i$
- if $\hat{\delta}(q, 1^i) \in F$, then the machine will foolishly accept $0^i 1^i$

In other words: state q would represent inconsistent information about the count of occurrences of 0 in the string read so far

Therefore A does not exist, and L_{01} is not a regular language

Pumping lemma for regular languages

Theorem Let L be any regular language. Then $\exists n \in \mathbb{N}$ depending on L , $\forall w \in L$ with $|w| \geq n$, we can factorize $w = xyz$ with :

- $y \neq \epsilon$
- $|xy| \leq n$
- $\forall k \geq 0, xy^kz \in L$

Pumping lemma for regular languages

Proof

Suppose L is a regular language

Then L is recognized by some DFA A with, say, n states

Let $w = a_1 a_2 \cdots a_m \in L$ with $m \geq n$

Let $p_i = \hat{\delta}(q_0, a_1 a_2 \cdots a_i)$, for each $i = 0, 1, \dots, n$

There exists $i < j \leq n$ such that $p_i = p_j$

Pumping lemma for regular languages

Let us write $w = xyz$, where

- $x = a_1 a_2 \cdots a_i$
- $y = a_{i+1} a_{i+2} \cdots a_j$
- $z = a_{j+1} a_{j+2} \cdots a_m$

Evidently, $xy^kz \in L$, for any $k \geq 0$

Example

Let Σ be some alphabet, and let $w \in \Sigma^*$, $a \in \Sigma$. We write $\#_a(w)$ to denote the **number of occurrences** of a in w

We define

$$\underline{L_{eq} = \{w \mid w \in \{0,1\}^*, \#_0(w) = \#_1(w)\}}$$

In words, L_{eq} is the language whose strings have an equal number of 0's and 1's

Use the pumping lemma to show that L is not regular

Example

Proof Suppose L_{eq} were regular. Then $L(A) = L_{eq}$ for some DFA A

Let n be the number of states of A and let $w = 0^n 1^n \in L(A)$

By the pumping lemma we can factorize $w = xyz$ with

- $|xy| \leq n$,
- $y \neq \epsilon$

and state that, for each $k \geq 0$, we have $xy^kz \in L(A)$

$$w = \underbrace{000 \dots 00}_x \underbrace{\dots 00}_y \underbrace{\dots 0111 \dots 11}_z$$

Example

Let $L_{pr} = \{1^p \mid p \text{ prime}\}$. Using the pumping lemma, show that L_{pr} is not regular

Proof Let n be as in the pumping lemma, and let $p \geq n + 2$ be some prime number. Thus $1^p \in L_{pr}$

By the pumping lemma we can write $w = xyz$ with

- $|xy| \leq n$,
- $y \neq \epsilon$

such that, for each $k \geq 0$, we have $xy^kz \in L(A)$

Example

Let $|y| = m \geq 1$

$$w = \overbrace{111 \dots \dots 1 \ 1111 \dots 11}^p$$

$$\underbrace{\hspace{1.5cm}}_x \quad \underbrace{\hspace{1.5cm}}_y \quad \underbrace{\hspace{1.5cm}}_z$$

$$|y|=m \geq 1$$

Choose $k = p - m$, so that $xy^{p-m}z \in L_{pr}$ and then $|xy^{p-m}z|$ is a prime number

Example

We can write $|xy^{p-m}z| = |xz| + (p-m)|y| =$
 $p - m + (p - m)m = (1 + m)(p - m)$

Let us verify that none of the two factors is a 1 :

- $y \neq \epsilon$, thus $1 + m > 1$
- $m = |y| \leq |xy| \leq n$, $p \geq n + 2$, thus
 $p - m \geq n + 2 - m \geq n + 2 - n = 2$

We have derived a contradiction

$$L_k = \{ ww^k \mid w \in \Sigma^* \}$$

Consider $\underbrace{0 \dots 0}_n \mid \underbrace{110 \dots 0}_{n+2}$

for $k=0$ $ww^k = xz$

$$x = \underbrace{0 \dots 0}_{n-1} \mid \underbrace{110 \dots 0}_n \notin L$$
